ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling and semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.

3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.

4. Use only a anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.

5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.

6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)

7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together or your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

LEAKAGE TEST (FOR SERVICE ENGINEERS IN THE U.S.A.)

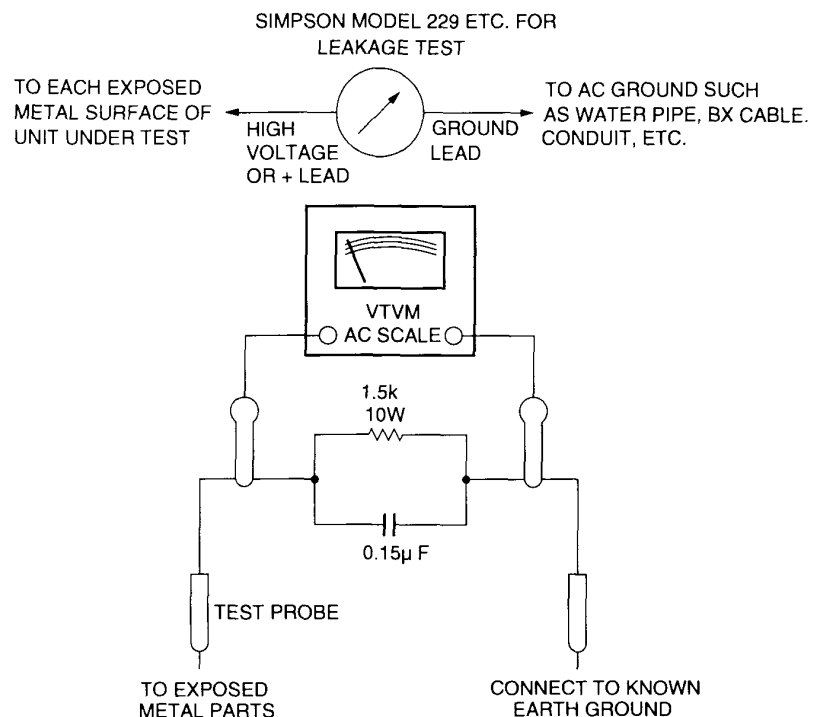

Before returning the unit to the user, preform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between parts in the unit.

2. Be sure that any protective devices such as nonmetallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. which were removed for servicing are properly reinstalled.

3. Be sure that no shock hazard exists; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows: Plug the power cord directly into a 120-volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a 1500 Ohm, 10-watt resistor parallel by a 0.15 F capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 Ohms per volt, or higher sensitivity to measure the AC voltage drop across the resister. (See Diagram.) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the power switch in both the On and Off positions.)

A reading of 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

AVR75 & AVR85 FRONT PANEL CONTROLS

1. Power: Press this button once to turn the unit on and off. Once the unit is turned on, it may be turned off and then on again from the remote, if desired.

NOTE: When the remote is used to turn the unit off the LED surrounding the Power Switch will turn amber, indicating that the AVR75/85 is in a Standby mode. In this condition the unit is NOT disconnected from the AC main power supply.

2. AM/FM Tuner Selector: Press this button once to select the tuner. Press it again to switch between AM and FM.

3. Headphone Jack: Plug standard stereo headphones into this jack for private listening.

NOTE: When the headphones are in use the output to the speakers is muted and the surround mode is automatically switched to **STEREO**. When the headphones are removed from the jack, sound to the speakers is restored and the unit returns to the previous sound mode.

4. CD: Press this button to select the CD player.

5. Tape 1/Monitor: Press this button to select Tape One as the input source. A red LED above the button will illuminate to indicate that the Tape Monitor has been selected.

6. Night Mode: Press this button to activate the "Night" mode, preventing loud playback when the digital modes are in use.

7. Tape 2: Press this button to select tape 2 input.

8. TV Input: Press this button to select the source connected to the **TV Input (38)**.

9. Digital input Selectors: Press one of these buttons to select a digital input source. The digital audio source may be the same as, or different from, the analog audio of the selected video source.

10. DVD Input: Press this button to select the source connected to the **DVD Input (37)**. Note that the DVD or LV player's digital audio output is used, it must be selected separately using the **Digital Input Selectors (9)**.

11. Video Sources: Press any of these buttons to select a video input source.

12. Mode: Press these buttons to scroll up or down through the list of available surround modes.

13. OSD (On-Screen Display): Press this button to activate the Attenuation mode which cuts the analog input signal by 50% to compensate for high-level input sources.

14. ATT Attenuation Mode Select: Press this button to activate the Attenuation Mode which cuts the analog input signal by 50% to compensate for high-level input sources.

15. Memo: The memo button is used to enter stations to the tuner's preset memory in either the manual or automatic modes.

16. Clear: The clear button is used to cancel tuning, memory input or when cleaning the unit's memories.

17. FM Mode: Press this button to select the tuning mode for FM stations.

18. Bass: This knob adjusts the tone of low-frequency sounds. Turn it to the right to boost bass frequencies or to the left to cut bass frequencies.

19. Treble: This knob adjusts the tone of high-frequency sounds. Turn it to the right to boost high frequencies or to the left to cut high frequencies.

20. P-Set: Press this button to manually scroll up or down through the FM or AM stations programmed into the receiver's preset memory.

21. Balance: This knob adjusts the balance between the front left and right speakers.

22. P-Scan: Press this button to automatically scan through the FM or AM stations preset into the receiver's memory. Press the button again to stop the scan when the tuner is at the desired station.

23. Tune: Press this button to manually scan up or down through the FM or AM bands.

24. Video 3 Input: Audio or Video sources connected to these jacks may be selected by pressing the **Video Source** button **(11)**.

25. Mute: Press this button to cut the output to the speakers. Press it again to return to the previous volume level.

26. Volume Control: Turn the knob clockwise to increase volume, counterclockwise to decrease the volume. Note that approximately two revolutions of the knob are required to go from no output to maximum volume.

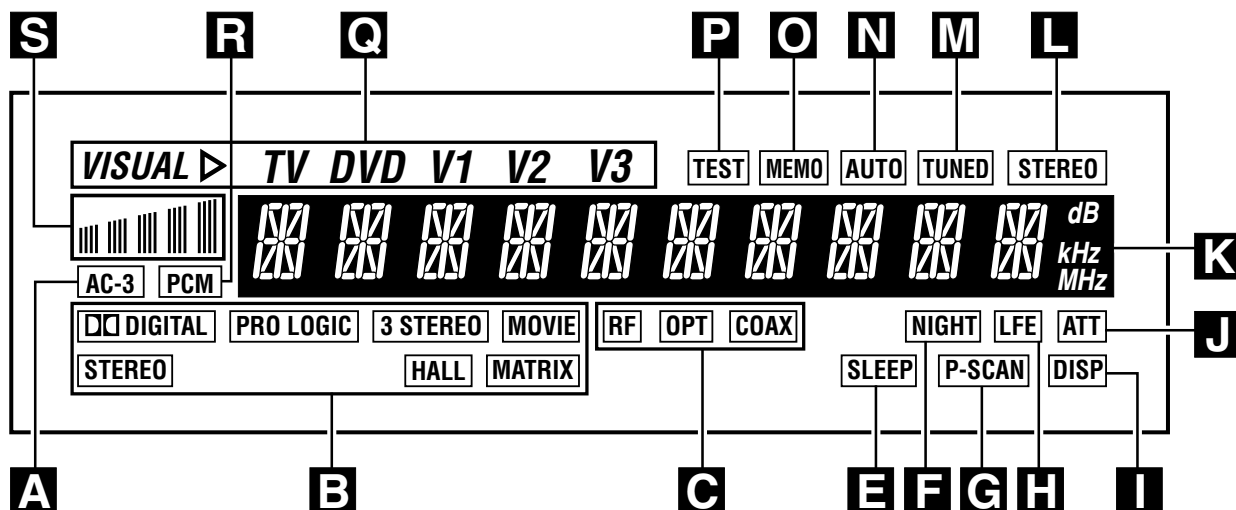

27. Information Display: This display delivers messages and status indications to help you operate the receiver. Refer to the separate diagram for complete explanation of the FL display.

28. Remote Sensor Window: The sensor behind this window receives infrared signals from the remote control. Aim the remote at this area and do not block or cover it unless an external remote sensor is installed.

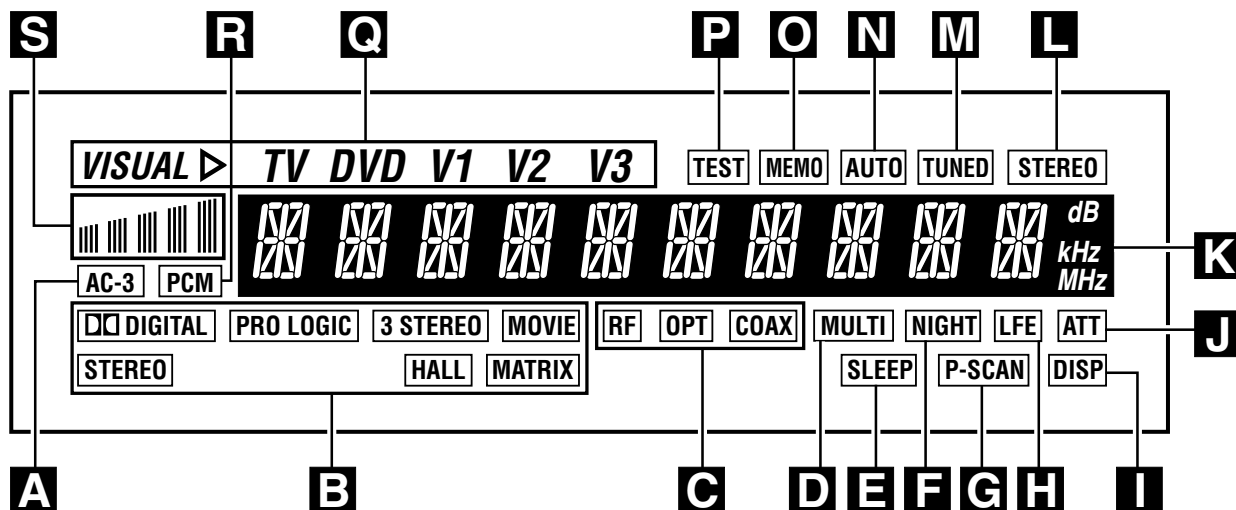

29. Multiroom Control: **NOTE: this feature differentiates the AVR85 from the AVR75. The AVR75 does not have this feature.** Press this button to turn the remote room feed On or Off. The MULTI indicator (D) will light or flash when the remote feed is On. Note that the remote feed will remain On after the main room power is turned Off until it is switched Off by pressing this button again.

AVR75 & AVR85 FRONT PANEL DISPLAY

AVR75 DISPLAY

AVR85 DISPLAY

A. AC-3 Indicator: This indicator illuminates when the AVR75 is decoding a Dolby Digital input source.

B. Surround Mode Status: These indicators display the currently selected surround mode.

C. Digital Mode Indicators: These indicators show which digital input is in use.

D. Multi: This indicator signifies that the AVR85 is sending a program source to a remote room location. Note that it may be illuminated even when the unit is "off" in the main listening room, signifying that operation continues at

another location. When a remote command is being received via the **Multi IR connection (59)**, this indicator will flash. **NOTE: this feature differentiates the AVR85 from the AVR75. The AVR75 does not have this feature.**

E. Sleep Indicator: This indicator lights when the AVR75/85 is in the Sleep mode.

F. Night Indicator: This indicator lights when the AVR75/85 is in Night mode, which prevents the AVR75/85 from loud playback when digital sources are in use.

G. P-Scan: This indicator flashes when the stations programmed into the tuner memory are being automatically reviewed.

H. LFE Indicator: This indicator will illuminate when the Low-Frequency Effects (LFE) option has been turned on through the controls in **SETUP MENU 3**.

I. DISP: This indicator lights when the FL display has been turned off using the Display button (16) to remind you that the unit is still turned on.

J. ATT Indicator: This indicator lights when the Attenuation function has been engaged to cut the input from analog sources by approximately 50%.

K. Main Information Display: This ten-digit display shows messages relating to the status, input source, surround mode, tuner, volume level or other aspects of unit's operation.

L. Stereo: This indicator lights when an FM station is broadcasting in stereo.

M. Tuned: This indicator lights when an AM or FM station is properly tuned and locked.

N. Auto: This indicator signifies that the Automatic Tuning mode is in use for FM broadcasts.

O. Memo: This indicator flashes when the **Memo** button is pressed when entering presets and other information into the tuner's memory.

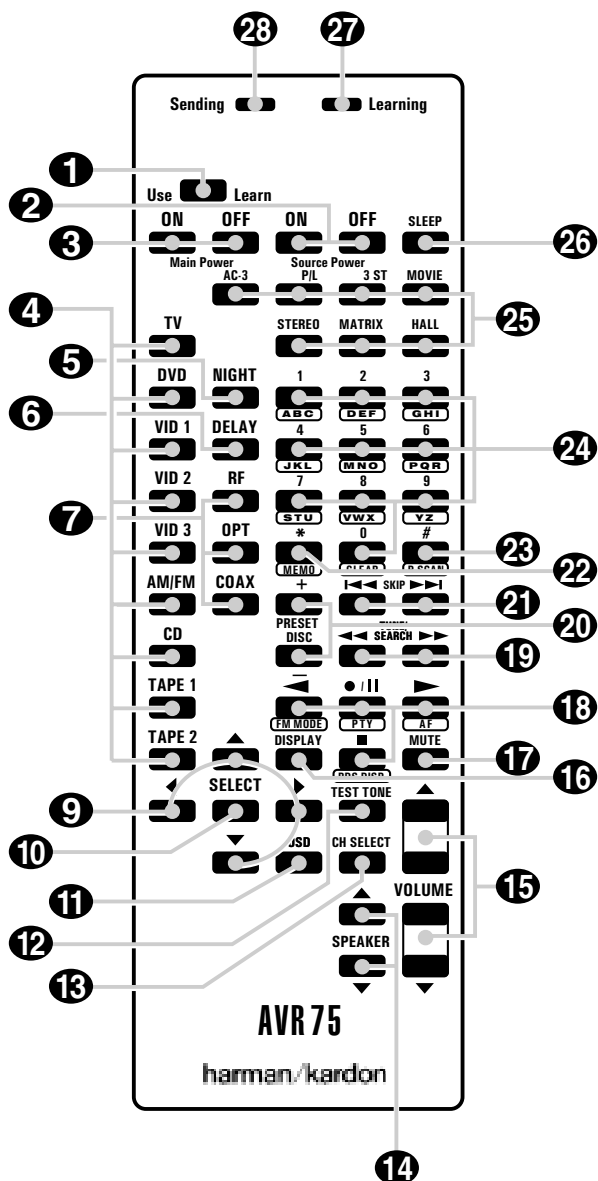

P. Test: This indicator flashes when the output levels are being set using the built-in test signal generator.

Q. "Visual" Indicator: These indicators display which input source is being fed to the video monitor output.

R. PCM Indicator: This indicator illuminates to show that a standard PCM (S/P-DIF) digital audio signal is being decoded by the digital-to-analog converter.

S. Signal Level Indication: This is a visual indication of the the strength of a radio station signal. The more bars visible, the stronger the station.

AVR75 & AVR85 REMOTE CONTROL INFORMATION ...continued

1. Use/Learn: This switch selects the operation mode of the remote control. Slide it to the left for normal operation. Slide it to the right when the remote is being programmed.

2. Source Power: When power on/off commands have been programmed into the remote's memory, press these buttons to control power for the last source device selected.

3. Main Power: Press these buttons to turn the unit on or off (to Standby Mode).

4. Source Selection: Pressing one of these buttons selects the input source that will be listened to through the receiver. When a source is selected the remote's transport and numeric number buttons will also transmit the commands needed to control that machine.

5. Night Mode: Press this button to activate the "Night" mode, preventing loud playback when the digital modes are in use without altering the dynamic range of the output signal.

6. Delay: Press this button to change the delay for the surround channels when the Surround Mode Menu is on the screen.

7. Digital Audio Input Selectors: Press one of these buttons to select a digital input source. The digital audio source may be the same as, or different analog audio of the selected video source.

8. Multiroom Control: Press this button to turn the remote room feed on or off. The **Multi** indicator  will light or flash when the remote feed is on. Note that the remote zone feed will remain on after the main room power is turned off until it is switched off by pressing this button again.

9. Menu Controls: These buttons control the action of the cursor or the selection of menu items when the receiver is being configured using the setup menus.

10. Select: This button enters settings to the receiver's memory during system configuration.

11. OSD: Press this button to activate the on-screen menu system.

12. Test Tone: Press this button to begin calibration of the output level for each channel. A test signal will immediately be heard from the left front speaker and the **Test** indicator  will flash.

13. Channel Select: Press this button to view a status report of the output level for each channel. When the Test Tone is audible and the system output levels are being set, pressing this button will advance the channel being adjusted in a clockwise direction to the next channel.

14. Speaker Level Adjust: When setting the system output levels, press these buttons to increase or decrease the output level.

15. Main Volume: These buttons control the unit's volume. Note that all channels are controlled simultaneously.

16. Display: Press this button to turn off all displays and indicators in the Information Display except for a small **Disp** indication in the lower right corner of the display . Press the button again to turn the display back on.

17. Mute: Press this button to temporarily cut the audio output of the receiver. Press it again to return to the previous volume level.

18. Transport Controls: These buttons may be programmed to control the tape or disc motion of the last playback source selected with the **Source Selection** buttons . Use them as you would the Play, Stop, Pause, Record, Reverse Play and Forward Play buttons on any **VCR**, **CD**, cassette, **DVD** or **LD** remote control. The Reverse Play button  also operates the FM Mode function of the AVR75/85's tuner.

NOTE: The /II,  and  buttons are also used to control the **PTY**, **AF** and **RDS Display** functions of the tuner.

19. Tune/Search & Fast Forward: These buttons may be programmed to have multiple functions, which vary according to the input device selected.

a. When the **TUNER** has been selected, these buttons are used to tune stations.

b. When **CD**, **Tape**, **DVD**, **LD** or **VCR** is the input source, these buttons act as the Fast Scan Forward  or Fast Scan Reverse  controls.

20. Preset/Disc: These buttons have multiple functions, which may vary according to the input device codes programmed.

- a. When the **TUNER** has been selected, these buttons will scroll up  or down  through the stations that have been programmed in the preset memory.
- b. When **CD** is selected and the unit is a CD changer, these buttons will change to the next disc  or previous disc .
- c. When **Tape 1** or **Tape 2** is the input source, and the tape machine is a compatible Harman Kardon dual cassette deck, these buttons will switch between the "A" and "B" sides.

21. Channel/Skip: These buttons have multiple functions, which vary according to the input device selected and the codes programmed from another remote.

- a. When **TV**, **Vid 1** or **Vid 2** are selected, they may function as the channel up  or channel down  tuning buttons when programmed with the codes from another unit's remote.
- b. When **CD** is selected these buttons act as forward and reverse "Skip" buttons to move to the next track or chapter on the disc.
- c. When a compatible Harman Kardon cassette player has been selected as **Tape 1** or **Tape 2**, these buttons move the tape forward  or backwards  to the next selection using the Music Scan feature.

22. Memo: The memo button is used to enter stations to the tuner's preset memory in either the manual or automatic modes. It is also used in the process of clearing the memory. This button also performs the functions of the "★" symbol on compatible equipment.

23. P-Scan: Press this button to automatically scan through the stations preset into the tuner memory. Press the button again to end the scan when the tuner stops at the desired station. This button also performs the functions of the "♯" symbol on compatible equipment.

24. Number Keys: These buttons serve as a ten button numeric keypad to enter tuner preset positions. They are also to be used to select channel numbers when **TV** has been selected on the remote, or to select track numbers on a **CD**, **DVD** or **LD** player, depending on how the remote has been programmed. The letters below the buttons are used to enter information for tuner station names.

NOTE: The **0** button has a dual function. It also serves as the **CLEAR** button for use in programming the tuner or clearing the system memory.

25. Surround Mode Selection: Press one of these buttons to select a surround mode for the current listening session.

26. Sleep (AVR75): Press this button when the Sleep timer has previously been activated to view the time remaining before the unit turns off to the Standby Mode. To activate the Sleep function, first put the unit in the Tuner Mode by pressing the **AM/FM** button  . Next, press the **Sleep** button  and note that the **Sleep** and **Memo** indicators   will blink. Within that blinking time press the **Memo** button   and then press the **Sleep** button again to set the sleep time in the following order:

When the desired time is shown in the display, press the **Memo** button   to enter the time. The unit will go into the Standby Mode when the time entered has elapsed.

26. Sleep (AVR85): Pressing this button when the Sleep timer has previously been activated allows you to view the time remaining before the timer function turns the unit off. When the remote is in the **AM/FM** mode  , the Sleep function may also be changed or set by pressing this button so that the **Sleep** and **Memo** indicators   blink (timer not yet set) or Sleep time is indicated (timer set already). Within that time press the **Memo** button   so that both indicators blink slowly. Now press the **Sleep** button  again to set the desired sleep time in the following order:

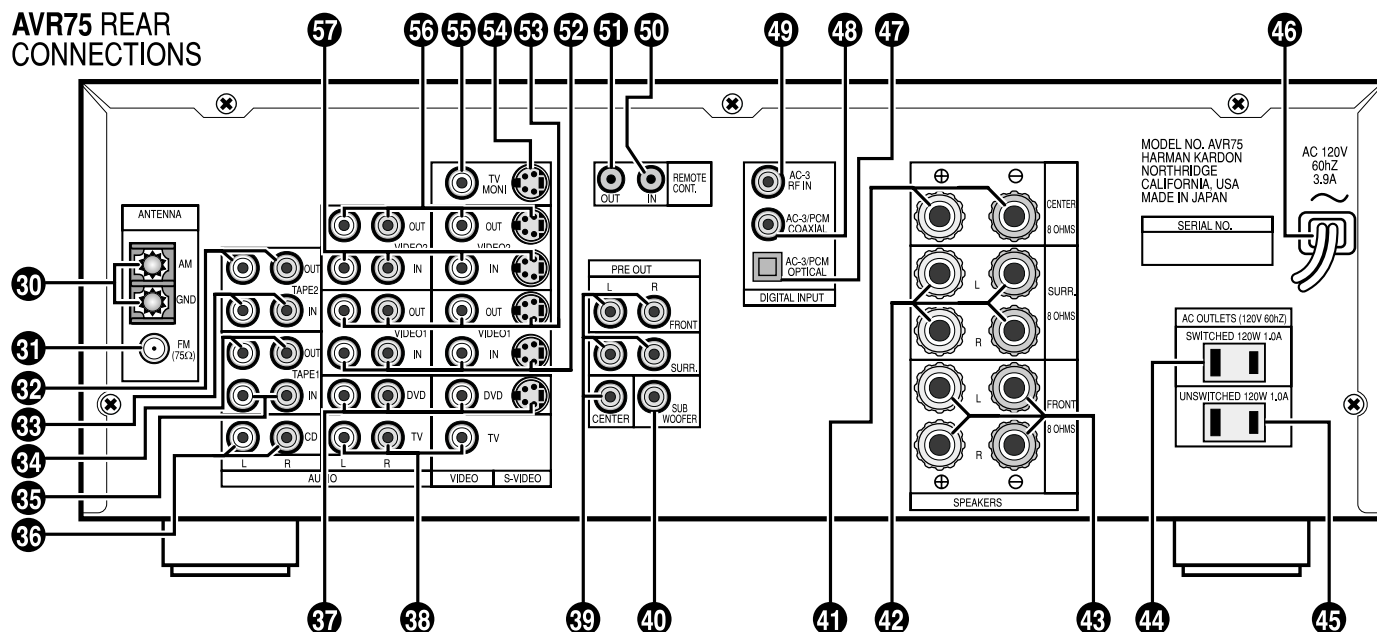

When the desired time is shown in the display, press the **Memo** button   to enter the time. The unit will go into the Standby Mode when the time entered has elapsed.

27. Learn LED: This indicator will illuminate when a button on the remote is being programmed with signals from another remote during the "learning" mode. The light will go out when the signal is received and memorized.

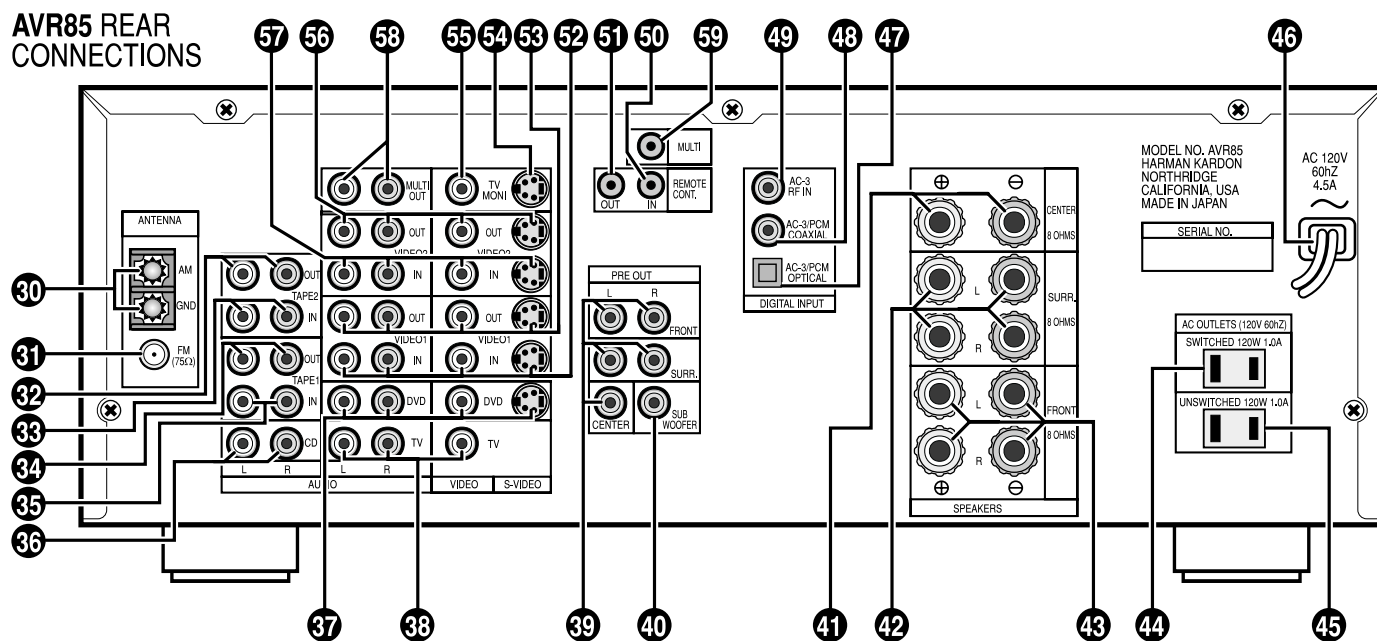

28. Sending LED: This indicator should flash any time a button is pressed to confirm that a command is being sent to the receiver or another unit. If the light is dim or does not illuminate when a button is pressed the batteries in the remote should be replaced.

AVR75 & AVR85 REAR PANEL CONNECTIONS

AVR75 REAR CONNECTIONS

AVR85 REAR CONNECTIONS

30. AM Antenna: Connect the AM loop antenna supplied with the receiver to these terminals. If an external AM antenna is used, make connections to the **AM** and **GND** terminals in accordance with the instructions supplied with the antenna.

31. FM Antenna: Connect an indoor or external FM antenna to this terminal.

32. Tape 2 Out: Connect these jacks to the RECORD/INPUT jacks of a second audio recorder.

33. Tape 2 In: Connect these jacks to the PLAY/OUT jacks of a second audio recorder.

34. Tape 1 Out: Connect these jacks to the RECORD/INPUT jacks of an audio recorder.

35. Tape 1 In: Connect these jacks to the PLAY/OUT jacks of an audio recorder.

36. CD IN: Connect these jacks to the output of a compact disk player or CD changer.

37. DVD Inputs: Connect the analog audio outputs and composite or S-Video output of a DVD or LV player to these jacks.

38. TV Inputs: Connect these jacks to the audio and video outputs of a TV Tuner, Cable TV converter box, satellite receiver, or any other audio/video source.

39. Pre-Outs: If external power amplifiers are used for any channels, connect them to these jacks.

40. Subwoofer Pre-Out: Connect this jack to the line level input of a powered subwoofer. If an external subwoofer amplifier is used, connect this jack to the subwoofer amplifier input.

41. Center: Connect these terminals to the center speaker.

42. Surround: Connect these terminals to the surround speakers.

43. Front: Connect these terminals to the front speakers.

44. Switched AC Outlet: This outlet may be used to power any device that you any wish to have on when the unit is turned on.

45. Unswitched AC Outlet: This outlet, may be used to power any AC device. The power will remain on at this outlet regardless of whether the AVR75/85 is on or off.

NOTE: The power consumption of the device plugged into each of these outlets should not exceed 120 watts.

46. Power Cable: Connect the AC plug to a non-switched AC wall output.

47. AC-3/PCM Optical Input: Connect the optical digital output from a DVD player, HDTV receiver, LV player or CD player to this jack. The signal may be either a Dolby Digital (AC-3) signal or a standard PCM digital source.

48. AC-3/PCM Coaxial Input: Connect the coax digital output from a DVD player, HDTV receiver, LV player or CD player to this jack. The signal may be either a Dolby Digital (AC-3) signal or a standard PCM digital source.

49. AC-3 RF Input: Connect the AC-3 RF output of an LV player equipped for digital audio to this jack.

NOTE: Do not connect standard analog sources to these jacks **(48)(49)**.

50. Remote IR In: If the AVR75/85's front panel IR sensor is blocked due to cabinet doors or other obstructions, an external IR sensor may be used. Connect the output of the sensor to this jack.

51. Remote IR Out: This connection permits the IR sensor in the receiver to serve other remote controlled devices. Connect this jack to the "IR IN" jack on Harman Kardon or other compatible equipment.

52. VCR 1 Inputs: Connect these jacks to the audio, video and S-Video PLAY/OUT jacks of a VCR.

53. VCR 1 Outputs: Connect these jacks to the audio, video and S-Video RECORD/IN jacks of a VCR.

54. TV Monitor S-Video Output: Connect this jack to the S-Video input of the TV monitor or video projector to view S-Video sources selected by the receiver's video switcher.

NOTE: Standard (composite) video and S-Video signals will appear only at their respective output. The AVR75/85 does not convert one video format to another.

55. TV Monitor Video Output: Connect this jack to the standard (composite) video input of a TV monitor or video projector to view the on-screen menus and the output of any standard video source selected by the receiver's video switch.

56. VCR 2 Outputs: Connect these jacks to the audio, video and S-Video RECORD/IN jacks of a second VCR.

57. VCR 2 Inputs: Connect these jacks to the audio, video and S-Video PLAY/OUT jacks of a second VCR.

58. Multiroom Audio Outputs: Connect these jacks to the optional audio power amplifier that powers remote room speakers with the input selected by the multiroom control system. This feature is found only on the AVR85.

59. Multi IR: Connect the output of an IR sensor in a remote room to this jack to operate the AVR85's multiroom control system. This feature is found only on the AVR85.

Service Bulletin #9705 for AVR85

Service bulletin # 9705 August 1997

To: All harman/kardon Service Centers

Models: **AVR85**

Subject: **No audio output**

In the event you receive an AVR85 with the complaint “no audio output” (even though the display is lit up normally), perform the necessary steps listed below:

PROCEDURE:

- 1) Make sure the receiver is OFF and unplugged; remove the top cover of the unit.
- 2) Position the unit on its side, facing it so you are looking at the bottom cover, with the front of the receiver facing left. The power transformer should be down, or nearest the work bench.
- 3) Remove the front right “foot” of the unit; then with a sharp pair of dikes or wire cutters cut the (16) metal connections on the bottom screen attaching it to the bottom cover. Remove bottom screen from unit; for safety continue to cut all the remaining severed metal tabs from the bottom cover.
- 4) Locate and discharge main power supply electrolytic capacitors C802 & C803 with a 10 ohm, 10 watt resistor. At this point, C802 & 803 are at the top of the main PCB; The two leads to C803 can be identified by the marking “-B” on the PCB; C802 is just above it. After discharge, check with voltmeter that capacitors have less than 1 volt DC across leads to confirm that discharge is complete.
- 5) See drawing; locate two areas of a poor solder connection due to an unintended mask, or dark-colored dot that is partially covering the solder pad(s) where the leads come through. Unsolder the connection(s) with solder wick. Clean & scrape, if necessary, with a small screwdriver the foil/pad area thoroughly and remove any excess mask residue. Re-solder the connection(s) carefully to assure good connections.
- 6) Turn the unit upright; locate PCB P714, the small vertical circuit board nearest the main heatsink. Unplug and remove small molex connector J701 at the top of the board; then remove the four mounting screws and metal tabs holding the top of the board in place.
- 7) Remove the two locks to the two sockets, J714 and J716. Take care not to damage the lock or connector while attempting to unlatch the PCB; then unplug and remove the entire PCB P714.
- 8) Locate 10 ohm, ¼ watt resistors RH23, RH24, R745, R746, R747, R748; test with multimeter to assure they are still 10 ohms +/- 5%. If values are different (indicating damage), replace as necessary.
- 9) Return PCB P714 to unit; re-attach molex connector; replace 4 screws and mounting tabs. Replace top cover of receiver.
- 10) Re-attach the bottom screen to the bottom cover using 12 screws, (H/K# 51260306MO); the screen will be upside-down compared to its former position when attached; replace the unit’s “foot”.
- 11) **TO TEST:**
 - a) Plug in the unit; connect speakers to left, right, and center output terminals.
 - b) Turn the unit on; switch the unit to “Prologic” mode by use of the mode buttons on the front panel.
 - c) Press the button “TEST TONE” on the remote control. The display should read “FRONT L” and “TEST” should flash.
 - d) Adjust the master volume, and verify test noise is heard from front left channel.
 - e) Press the button “CH SELECT” on the remote control to change to the right and center speakers, and verify test noise is heard from each one.
 - f) Press the button “TEST TONE” on the remote control again to exit the test.

Model	Serial number 120V	Serial number 230V	Status	Action
AVR85	MJ0011-01001 to MJ0011-02500	MJ0012-01001 to MJ0012-01500	Poor connections in two areas on main PCB	Clean & re-solder connections, check or replace RH23,RH24,R745,R746, R747, R748 if necessary
AVR85	MJ0011-02501 and above	MJ0011-01501 and above	Modified by factory	NONE REQUIRED

CONNECTION #2

SERVICE AND ADJUSTMENT

I. SERVICE PROCEDURE

1. Tracking Point Memory

This service procedure can be used for measurement of the tuner circuit. With the **POWER ON**, press the “**PRESET UP**” button while pressing the “**MEMO**” button for at least 3 seconds or more. FLD will display “**TRACKING**”. Frequencies to be memorized are as follows:

	VERSION	P1	P2	P3	P4
FM	US, Europe.	90.0	98.0	106.0	87.5

	SCAN STEP	P5	P6	P7	P8	P9	P10	P11	P12~P30
AM	10 KHz	600.0	1000.0	1400.0	520.0	←	←	←	←
	9 KHz	603.0	999.0	1404.0	531.0	←	←	←	←
	MW/LW	↑	↑	↑	171.0	207.0	270.0	152.0	531.0

2. FLD Segment Illumination

This service procedure will illuminate all segments by the following step: With the **POWER ON**, press the “**FM/AM (TUNER)**” button while pressing the “**MODE**” button for at least 3 seconds or more. This procedure takes 1 minute and 40 seconds to finish; at this point the procedure is complete.

Sequence

1. All segments will be illuminated for 5 seconds.
2. At the grid “**1G**”, segments are illuminated in the following order:
3. At the grid “**2G**” to “**11G**”, each segment is illuminated individually:

① KHz → ② MHz → ③ ATT → ④ LFE → ⑤ NIGHT → ⑥ MULTI → ⑦ COAX → ⑧ OPT →
⑨ RF → ⑩ MOVIE → ⑪ TAPE1 → ⑫ COPY → ⑬ VID1 → ⑭ SLEEP → ⑮ P - SCAN → ⑯ DISP

4. At the grid “**12G**”, segments are illuminated in the following order:

① VISUAL → ② SIGNAL BAR (LEFT SIDE) → ③ SIGNAL BAR (2nd LEFT) → ④ SIGNAL BAR (CENTER) →
⑤ SIGNAL BAR (2nd RIGHT) → ⑥ SIGNAL BAR (RIGHT SIDE) → ⑦ AC-3 → ⑧ PCM → ⑨  DIGITAL →
⑩ PRO-LOGIC → ⑪ 3 - STEREO → ⑫ MATRIX → ⑬ HALL → ⑭ THX CINEMA → ⑮ STEREO

3. All Clear

This service program can clear all memorized operations and functions. With the **POWER ON**, press the “**CD**” button while pressing the “**MODE▲**” button for more than 3 seconds. FLD shows “**CLEAR MEMO**” and power will be **OFF**.

II. ELECTRICAL ADJUSTMENT

1. Main amp idling current adjustment.

- 1) With the power **OFF**, set variable resistor **R755** (Lch), **R756** (Rch) **RH28** (Center ch) on the PC board (**P704**) to the center position.
- 2) Locate test points J723 (Lchan) J724 (Rchan) and J725 (Centerchan). These are 3 pin female molex connectors on the MAIN PCB. Attach a DC voltmeter (set to a low range) to the two outer pins on each test point. This is best accomplished by making up a “test plug” using a male molex connector that fits into the one in the unit, with wires attached, for connection to the voltmeter. An alternate method is to use two “mini-grabbers” to attach to the two outer pins on each connection. The middle pin has no connection.
- 3) After the above, adjust the idling current as follows: Turn the power **ON** and adjust variable resistor **R755** (Lch), **R756** (Rch), **RH28** (Center ch) while observing the reading on the voltmeter.

*The target value is **11mV** (25 mA).

NOTE:

When a unit whose idling current has been adjusted is switched on after 1 minute it reaches about 4.7~5.5mV. After 30 minutes, it reaches a balanced state and stabilizes at **8.9-11mV** (target). Therefore, if the adjustment is made 30 seconds after the power is switched on, adjust to 3.5 ~ 4.0mV. In the same way, if 1 minute has passed since the power was switched on, adjust to 4.7 ~ 5.5mV. From 1 to 2 minutes, adjust to 6.2 ~ 6.4mV. From 2 to 4 minutes, adjust to 7.1 ~ 7.6mV. From 4 to 7 minutes, adjust to 7.9 ~ 9.0mV. After more than 7 minutes since the power was switched on, adjust to the setting of 10.5 ~ 11.2mV. Here is a reference table for the adjustment values:

Time since power switched on	Idling current adjustment
30 seconds	3.5 ~ 4.0mV
1 minute	4.7 ~ 5.5 mV
1 - 2 minutes	6.2 ~ 6.4mV
2 - 4 minutes	7.1 ~ 7.6mV
4 - 7 minutes	7.9 ~ 9.0mV
More than 7 minutes	10.5 ~ 11.2mV

III. ALIGNMENT PROCEDURES

Test Equipment Required

- 1) AM/FM Signal Generator
- 2) Video Signal Generator
- 3) Digital Multimeter
- 4) Distortion level meter

1. AM IF Adjustment

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to transmission loop antenna. (:Standard required loop)	999 KHz (Europe) 1000 KHz (USA)	Level 300 V/m (50dB/m) Mod. 400 Hz 30%	Tuning point	LA06	Output level (L or R) Maximum at TAPE-OUT

REMARK: For receiving antenna, the one supplied with the unit is adequate.

This adjustment is not normally necessary, because the coil LA06 is preset by the original supplier.

2. AM Tracking Adjustment

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to transmission loop antenna. (:Standard required loop)	603 kHz (Europe) 600 kHz (USA)	Level 300 - 400 V/m Mod. 400 Hz 30%	603 kHz (Europe) 600 kHz (USA)	LA01	Output level (L or R) Maximum at TAPE-OUT
2		1404 kHz (Europe) 1400 kHz (USA)	Level 300 - 400 V/m Mod. 400 Hz 30%	1404 KHz (Europe) 1400 KHz (USA)	CA01	Output level (L or R) Maximum at TAPE-OUT
3	Repeat steps 1 and 2 until sensitivity is maximized.					

3. AM Tracking Adjustment (LW)

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to transmission loop antenna. (:Standard required loop)	171 kHz	Level 300 - 400 μ V/m Mod. 400 Hz 30%	171 kHz	LA03	Output level (L or R) Maximum at TAPE-OUT
2		270 kHz	Level 300 - 400 μ V/m Mod. 400 Hz 30%	270 kHz	CA08	Output level (L or R) Maximum at TAPE-OUT
3	Repeat step 1 and 2 until sensitivity is maximized.					

4. AM Auto Stop Adjustment

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Valve
1	Signal generator output to transmission loop antenna. (:Standard required loop)	999 kHz (Europe)	500 V/m (54 dB/m)	999 kHz (Europe)	RA11	"TUNED" indicate on FLD
2		1000 kHz (USA)	1000 V/m (60 dB/m)	AUTO SCAN	Only Confirm	"TUNED" indicate on FLD

REMARK: This adjustment is related to the FM muting Level Adjustment. The FM muting Level re-adjustment is necessary after this adjustment.

5. FM MONO. Distortion Adjustment

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to FM antenna terminal. (75)	98 MHz	500 V (54 dB) MONO 1 KHz/ Dev. 40 KHz 53.3% (Europe) MONO 1 KHz/ Dev. 75 KHz 100% (USA)	98 MHz (P2)	L201	Distortion level Minimum at TAPE-OUT

6. FM Muting Level Adjustment

Turn the variable resistor **R212** until the word **TUNED** is not shown in the display. Then adjust the resistor **R212** in the opposite direction until **TUNED** is shown in the display.

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to FM antenna terminal. (75)	98 MHz	6.3 V (16 dB) MONO 1 KHz/ Dev. 40 KHz 53.3% (Europe) MONO 1 KHz/ Dev. 75 KHz 100% (USA)	98 MHz (P2)	R212	"TUNED" indicate on FLD
2			Over mentioned level +3 dB	AUTO SCAN	Only Confirm	"TUNED" indicate on FLD

7. FM STEREO Distortion Adjustment

Adjust the **L channel** with the RF signal modulated only **L channel** first and confirm the **R channel** with the RF signal modulated only **R channel**.

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to FM antenna terminal. (75)	98 MHz	500 V (54 dB) L or R 1 kHz/ Dev. 40 kHz 53.3% PILOT 19 kHz/ Dev. 6 kHz 8% (Europe)	98 MHz (P2)	IF COIL in FRONT END	Distortion level Minimum at TAPE-OUT
2			L or R 1 kHz/ Dev. 67.5 kHz 90% PILOT 19 kHz/ Dev. 6.75 kHz 9% (USA)		R218	Distortion level Minimum at TAPE-OUT

REMARK: Adjustment with **R218** is not necessary when the distortion level is less than 0.5% with adjusting IF coil.

8. FM STEREO Separation Adjustment

Step	Input Signal Source Connection	Signal Frequency	Source Signal Output Level and Modulation	Reception Frequency	Adjustment Point	Adjustment Value
1	Signal generator output to FM antenna terminal. (75)	98 MHz	Same specification as FM STEREO distortion adjustment. Input only L channel	98 MHz (P2)	R211	Output level Minimum at TAPE-OUT channel R
2		98 MHz	Same specification as FM STEREO distortion adjustment. Input only R channel	98 MHz (P2)	R211	Output level Similar as Rch at TAPE-OUT channel L

9. On Screen Display VCO Adjustment

Step	Input Signal Source and Connection	Measuring Position	Measuring Equipment	Input Selector	Adjustment Point	Adjustment Value
1	Color bar or other standard video signal. Video signal generator output to LD video input.	IC QX60 26pin and GND	DC voltmeter (Impedance > 10k /V)	LD	CX67	2.5V 0.1V

REMARK: Connect the TV monitor to the monitor output terminal of the product.

ALIGNMENT AND TEST POINTS

ALIGNMENT AND TEST POINTS

IV. TECHNICAL DESCRIPTION

This product is a “Dolby Digital (AC-3)” decoder. By connecting this product with a Dolby digital compatible component such as a DVD player or DBS tuner, it will be capable of 5.1 CH (Front L/R, Rear L/R, Center and Sub-woofer) play.

This product is composed of approximately of 5 blocks including the AC-3 decoder & DAC block (**P604**), crossover block (**PC04**), power supply block (**P704**), volume control block (**PE04**) and front key input block (**PU04**).

V. SIGNAL AND CIRCUIT DESCRIPTION

OPT/COAX (AC-3/PCM input)

This signal is based on an additional format for transmitting the AC-3 data through the conventional digital audio interface (SPDIF). This SPDIF contains the compressed data for AC-3, instead of PCM Audio data. Similarly to the case of ROM data, whether the data is audio or non-audio is identified according to the status in the signal. This signal can be output from a DVD player, etc.

DAI (Digital Audio Interface) Receiver

This circuit extracts various clock and data signals from the signal input in the SPDIF format.

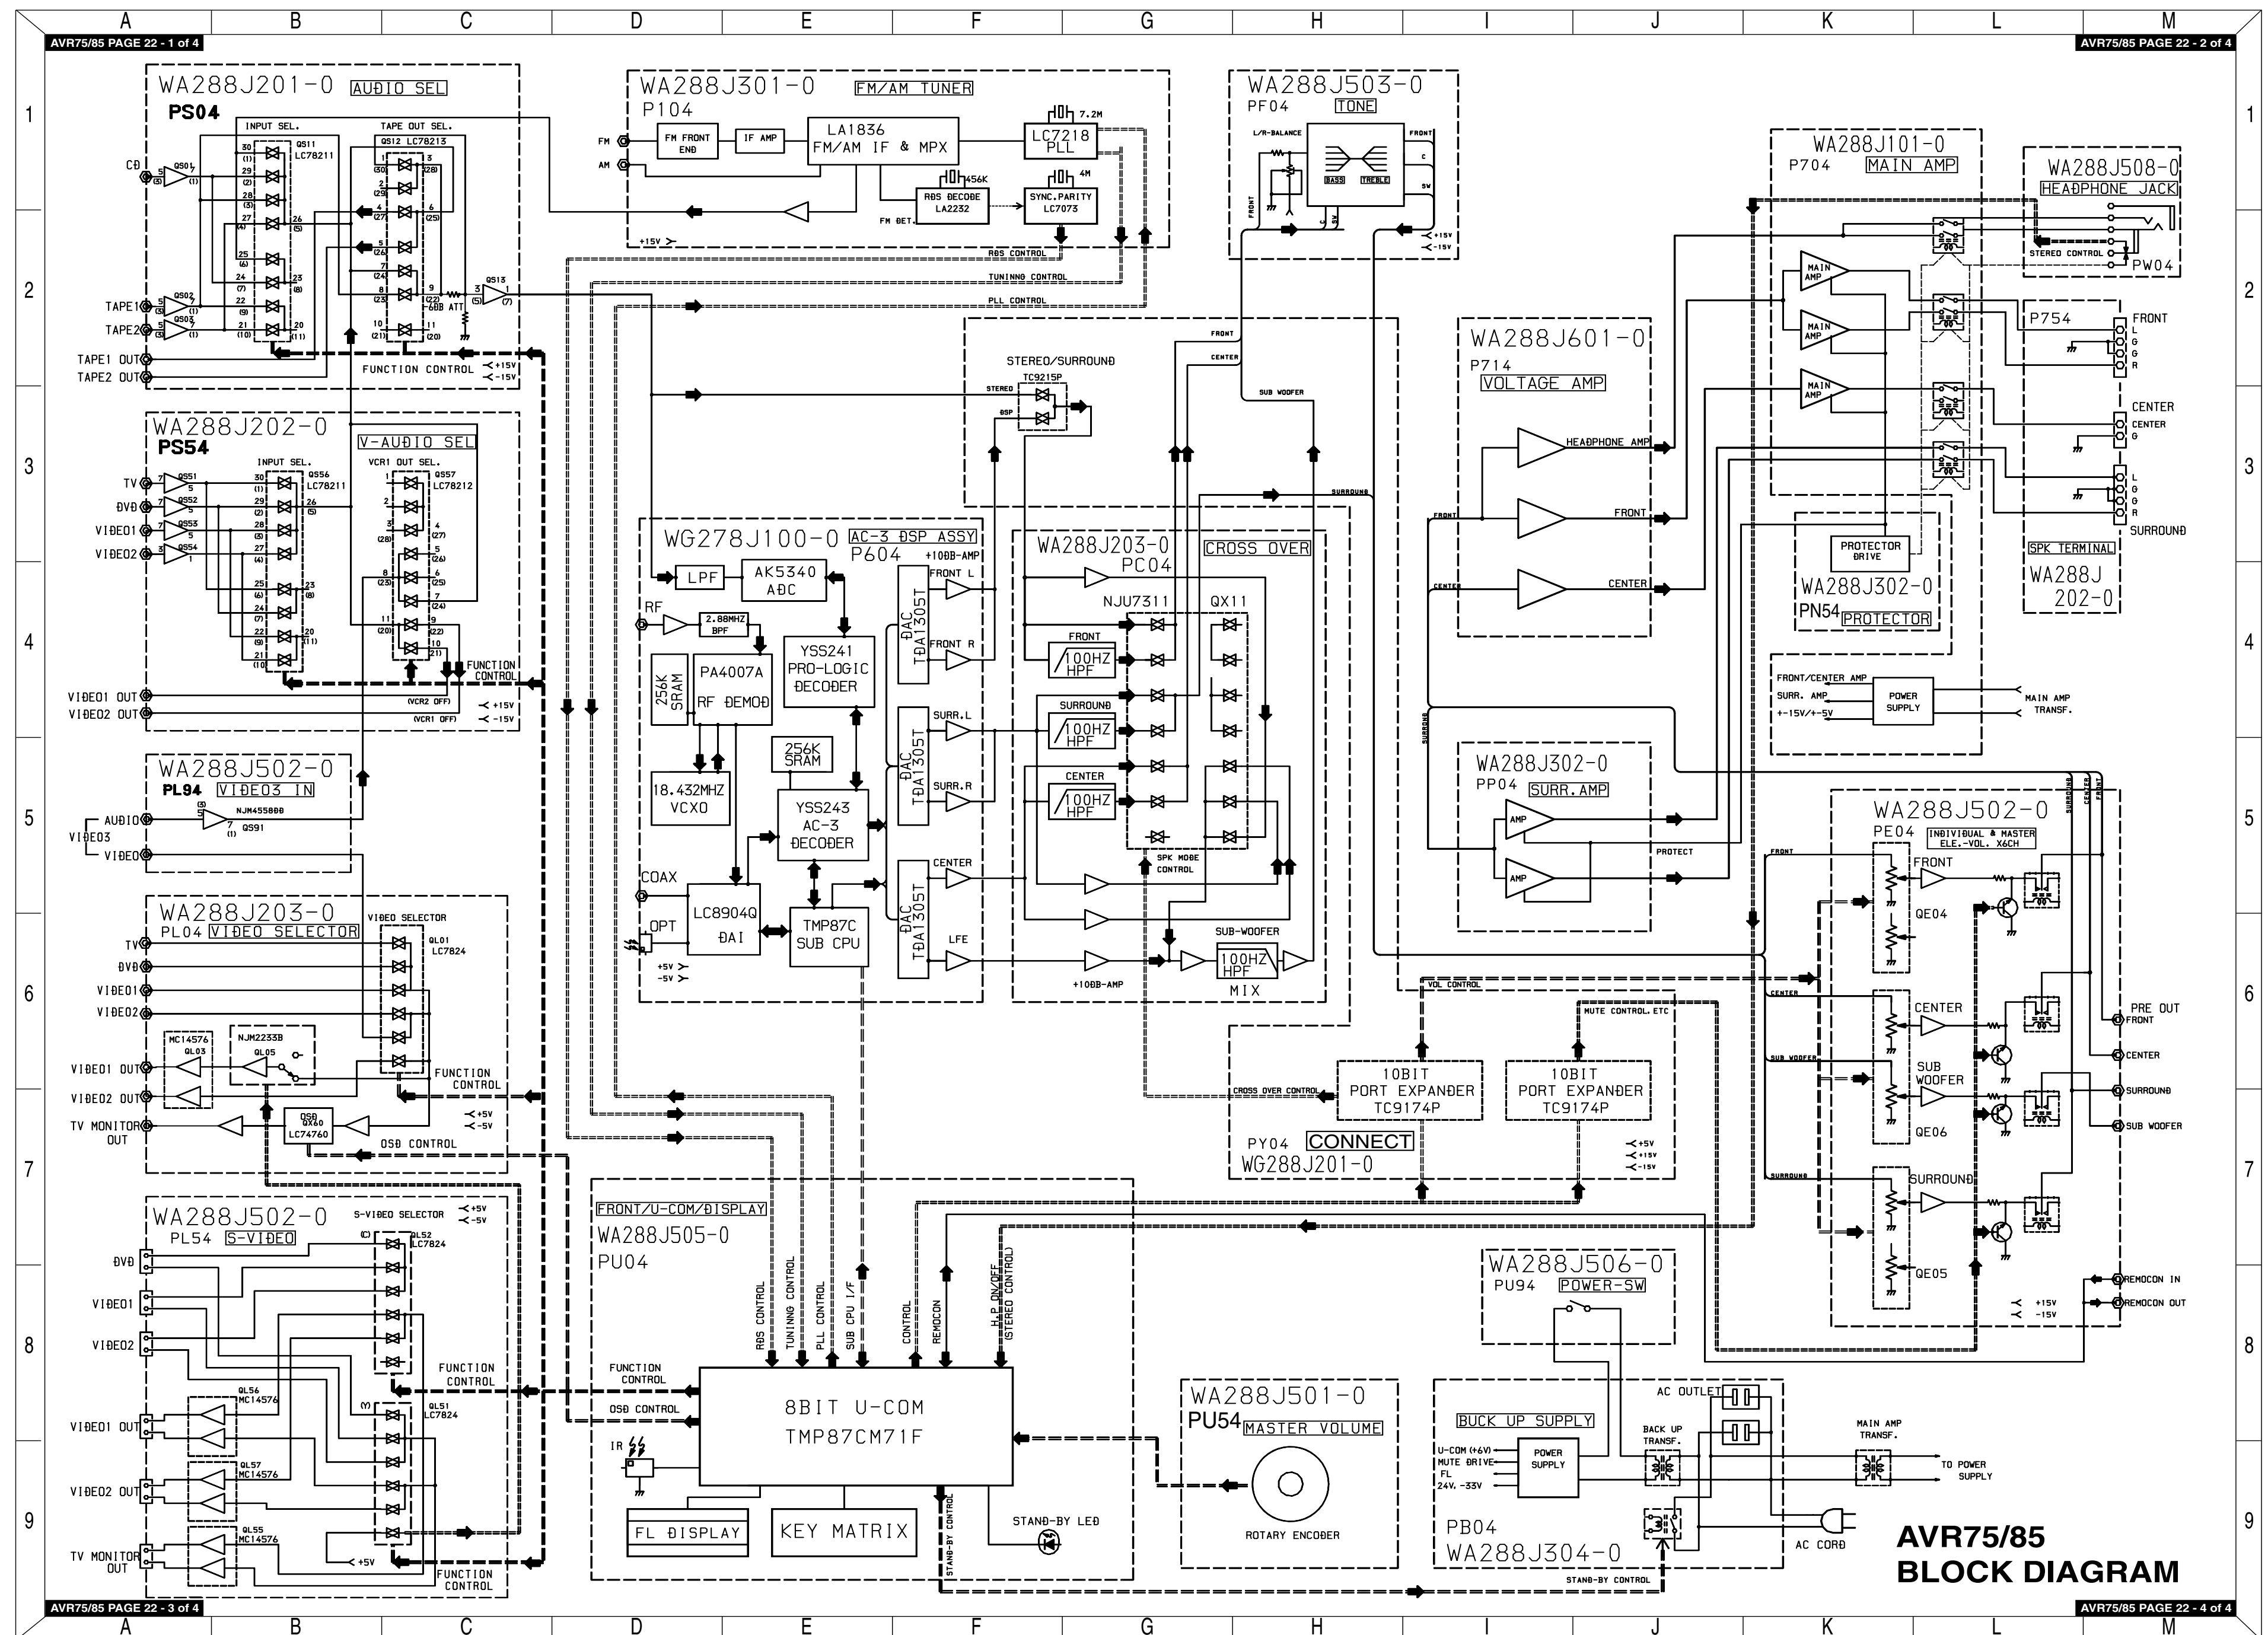

AC-3 Decoder DSP

This circuit generates the 6-channel data (Front L/R, Rear L/R, Center and LFE) based on the data output from the DAI, and outputs the 6-channel data to the DAC as 3 sets of 2-channel data.

Crossover

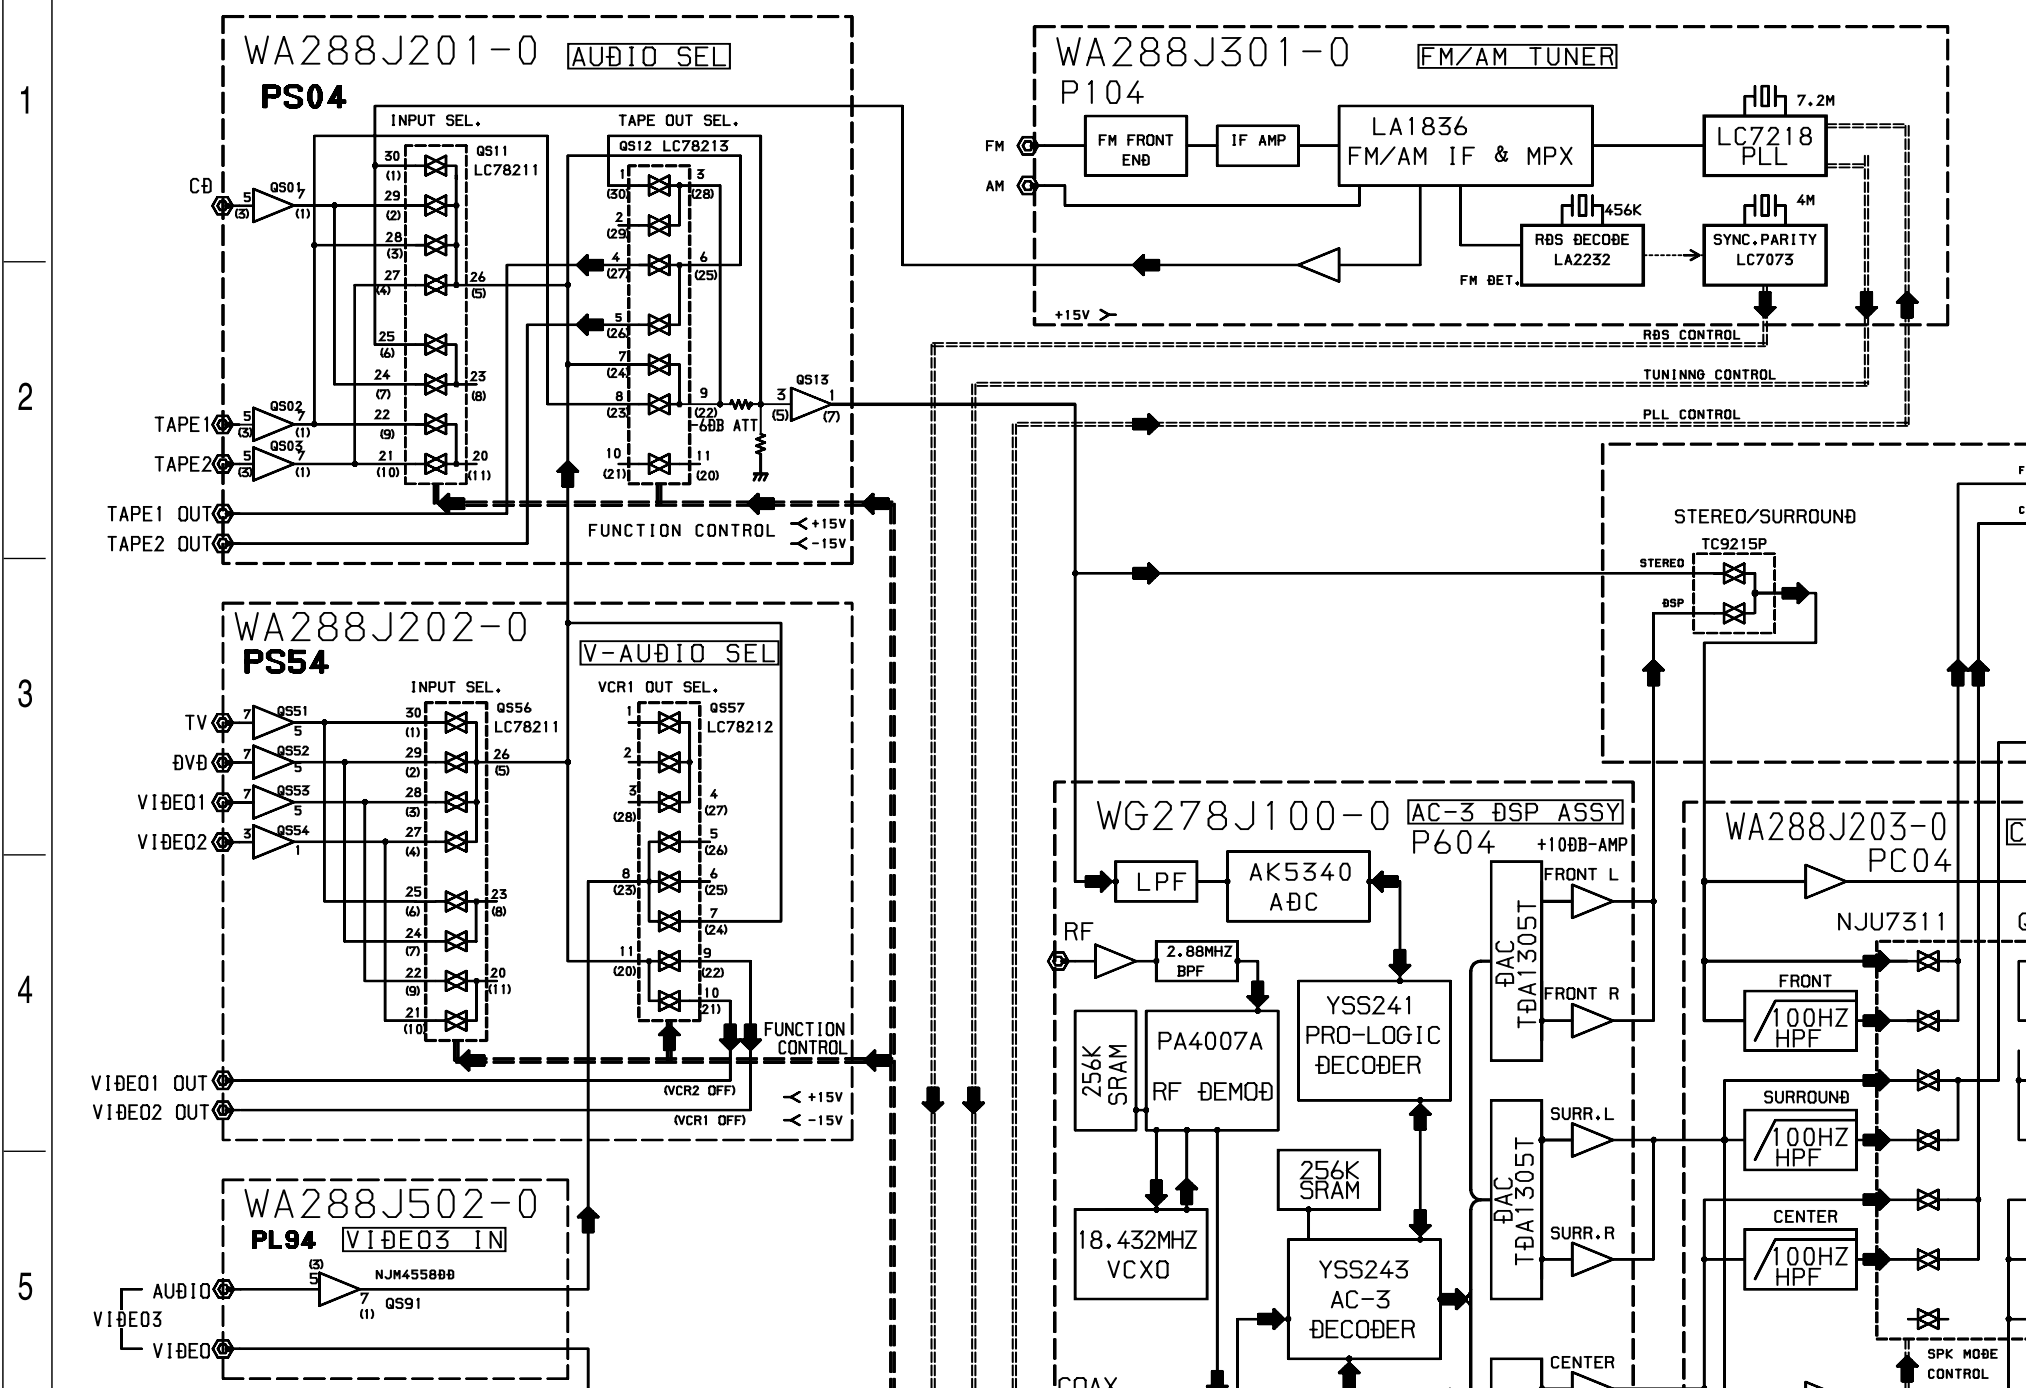

This circuit consists of 100Hz HPF for each channel, 100Hz LPF for sub-woofer channel, and mixing for sub-woofer output. Depending on the speaker mode setting, frequencies of this circuit will be changed.

SPECIFICATIONS

Power Supplies

USA/Canada AC 120V, 60Hz

Europe AC 230V, 50Hz

Dimensions (W x H x D)

Inches: 17 $\frac{1}{2}$ x 6 $\frac{3}{8}$ x 18"

mm 444 x 162 x 457mm

Weight (lbs/kgs) 34/15.4

These specifications are service target specs. Specifications and components are subject to change without notice. Overall performance will be maintained or improved.

General Test Conditions

1	Test Methods	Test methods for Tuners and Amplifier. CP-2101, C6102, C6104					
2	Power Source	The amplifier shall be tested at the (Primary power supply) conditions shown in table below.					
		Destination	Power Source				
		U	120 Volts	RMS	1%	60 Hz	2%
		N	230 Volts	RMS	1%	50 Hz	2%
3	Tuner Measurements	The FM signal shall be 500uV (65dBf) with 75kHz Deviation at 1000Hz and 50mV/m Loop injected with 30% modulation at 400Hz for AM, unless otherwise specified. TAPE OUT terminated with 47kohms load unless otherwise specified.					
4	Audio Measurements	All audio measurement shall be made with test signals injected into CD. Inputs and output measured at SPEAKER outputs with 8ohms 1% non-inductive resistor load, or at TAPE OUT with 10kohms 5%/1nF 5% loads, unless otherwise specified.					
5	Control Settings	Tone control : Mechanical center position Balance control : Mechanical center position Volume control : According to CP-2101 SPK SETT : ALL Large ATT : off unless otherwise specified AC-3 Section Setting Night Mode : off SPK SETT NO. 1 Front: Small, Center: Small, Surround: Small, Subw: ON SPK SETT NO. 2 Front: Large, Center: Large, Surround: Large, Subw: ON SPK SETT NO. 3 Front: Large, Center: Large, Surround: Small, Subw: OFF					
6	Used Test Disc	Dolby AC-3 Demonstration & Test Laser Disc Ver. 1.0 (for AC-3 RF)

PINNING

SYMBOL	PIN	DESCRIPTION
V _{DDA}	1	analog supply voltage
V _{SSA}	2	analog ground
TEST1	3	test input; pin should be connected to ground (internal pull-down resistor)
BCK	4	bit clock input
WS	5	word select input
DATA	6	data input
CLKS1	7	clock selection 1 input
CLKS2	8	clock selection 2 input
V _{SSD}	9	digital ground
V _{DDO}	10	digital supply voltage
TEST2	11	test input; pin should be connected to ground (internal pull-down resistor)
SYSCCLKI	12	system clock input
n.c.	13	not connected (this pin should be left open-circuit)
n.c.	14	not connected (this pin should be left open-circuit)
V _{SSD}	15	digital ground
SYSCCLKO	16	system clock output
DEEM1	17	de-emphasis on/off; f _{DEEM} 32 kHz, 44 kHz and 48 kHz
DEEM2	18	de-emphasis on/off; f _{DEEM} 32 kHz, 44 kHz and 48 kHz
MUSB	19	mute input (active LOW)
DSMB	20	double-speed mode input (active LOW)
ATSB	21	12 dB attenuation input (active LOW)
VOL	22	left channel output
FILTCL	23	capacitor for left channel 1st order filter function should be connected between pins 22 and 23
FILTCL	24	capacitor for right channel 1st order filter function should be connected between pins 25 and 24
VOR	25	right channel output
V _{ref}	26	internal reference voltage for output channels (0.5V _{DD})
V _{SSD}	27	operational amplifier ground
V _{DDO}	28	operational amplifier supply voltage
